## Evening Brief

Date: Sunday July 5<sup>th</sup>, 2020

### Weather Summary

**\*\*\* Extended Period of Hot/Dry Weather in Most Areas This Week\*\*\***

**\*\*\* High Risk for Winds/Low RH over much of NV/UT/AZ Strip Monday-Tuesday \*\*\***

The hot/dry conditions across the Great Basin will continue this week as strong high pressure remains across the Rockies and Central Plains.

As low pressure briefly drops into British Columbia today, winds will also begin to strengthen across the western portions of the Great Basin, with stronger winds Tuesday spreading eastward into Utah and SE Idaho. **High Risk has been issued for Mon-Tue for much of NV/UT/AZ Strip** with gusts over 30 mph expected. RH will be particularly dry, with single digits most of next week across Nevada, Utah and the AZ Strip, and into the teens across southern Idaho. Southwest winds will also pick up across southern Idaho on Tuesday, but fuels are not as critical as areas further south. However some pockets of dry fuels across the Snake River Plain have been problematic with fire spread over the past few days.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 3	New Fires and Acres: 71 fires 379.3 acres; 1,325 acres large fire growth

---

### Fuels/Fire Potential

**Upcoming warm/very dry/breezy weather this week will rapidly dry fuels across the Great Basin.**

Unseasonably cool and wet weather across the northern part of the Great Basin have modified fuels in the higher terrain of Idaho and Wyoming. However, pockets of south central Idaho have received little precipitation, and it's in these areas that fuels are much drier than surrounding areas and larger fires continue to pop up.

Further south, where precipitation has been sparse over the past few weeks, several days of hot/dry conditions have pushed both 10-hr and 100-hr fuels below 5%. Fire activity has been picking up significantly with added initial attack in areas of recent lightning.

Grasses are mostly cured below 6000 feet in nearly all areas. Some new grass growth may be emerging in areas that have received over an inch of precipitation the past 3 weeks, namely northeast Nevada, far northern Utah and much of southern Idaho.

Sagebrush live fuel moisture across the southern half of the Great Basin have dropped below 120%, and below 100% in the far south, so in those areas the brush is becoming consumed as part of the fire environment. In the northern portion of the Great Basin is generally above normal and above the 120% threshold. However, across the central and southern portion of the area sagebrush moisture is at or below normal for the time of year.

## Resources:

### Aviation within the Great Basin

- 1 VLAT, 3 LATs
- 21 SEATs
- 8 Type 1 Helicopters / 7 Comm.
- 13 Type 2 Helicopters / 9 Comm.
- 17 Type 3 Helicopters

### Crews Committed within the Great Basin

- 18 IHCs Committed / 4 Avail.
- 22 T-2 IAs Committed / 7 Avail.

## Current Incident Details

Todays Activity (from WFDSS):
